

Date: 07.02.2026; 1404/11/18

Patient's Name: M.S

Responsible Physician: Dr. Omranipour

Patient presentation:

80 Y/O female with family history of pancreatic cancer in brother, underwent BCS+ALND (IDC, ER: 90%, PR: 90%, HER-2:0, Ki67:40%, pT: 2.5cm, G3, LVI+, DCIS: high grade, all margins are free, 4/6 LN involved with extranodal extension)

Chest CT: 2.7mm nodule in lingula, tiny subpleural nodules in right lung up to 2mm, recommended to F/U 3-6 months

Abdominopelvic CT: 86*72mm solid-cystic mass at mid-lower pole of right kidney with extension to right renal vein

She underwent partial nephrectomy: clear cell renal cell carcinoma, nuclear grade: 3, pT: 10cm, LVI: +, margins are involved.

Question:

Is she candidate for adjuvant chemotherapy and radiotherapy?

Recommended plan:

MDT recommended to administer AI+CDK4/6 inhibitor+ XRT to breast+ immunotherapy.
