

Date: 31.01.2026; 1404/11/11

Patient's Name: A.K

Responsible Physician: Dr. Esfandbod

Patient presentation:

52 Y/O female with history of left breast cancer which underwent NACT+BCS+SLNB+ radiotherapy + immunotherapy **(1402)**

1404: she developed a focal neurological deficit and Brain MRI revealed no metastasis but a cystic lesion in left hemisphere, biopsy and IHC revealed metastasis of breast origin

She started chemotherapy but as she developed hemiparesis and symptoms aggression, she underwent a craniotomy

Question:

What is the treatment plan?

Recommended plan:

The MDT recommended to perform a stereotactic radiotherapy and continue on antiher2 therapy.
