Date: 1405/08/02, 2026/10/24

Patient's Name: E.

Responsible Physician: Dr. Esfandbod

Patient Presentation:

A 77 Y/O woman with luminal an invasive ductal carcinoma (IDC) and a Ki-67 index of 10%. The bone scan is suspicious for bone metastases; however, the PET/CT scan is negative.

Question:

Can these bone lesions be considered metastatic?

Recommended Plan:

The PET/CT scan is unremarkable, with no evidence of metastatic disease.
