Date: 1405/08/02, 2026/10/24

Patient's Name: P.T.

Responsible Physician: Dr. Esfandbod

Patient Presentation:

A 51 Y/O female

PSH: hysterectomy/thyroidectomy

Right breast masses in UOQ and right axillary adenopathy

CNB: invasive ductal carcinoma

ER+

PR+

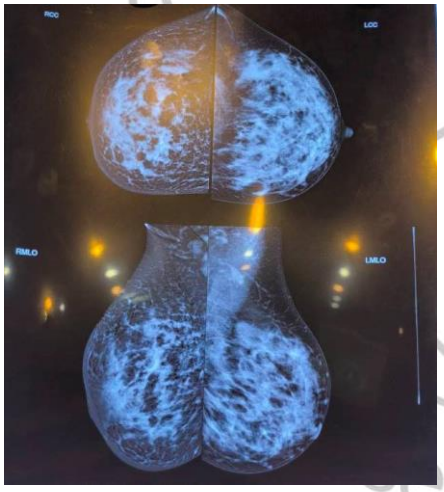

HER2-

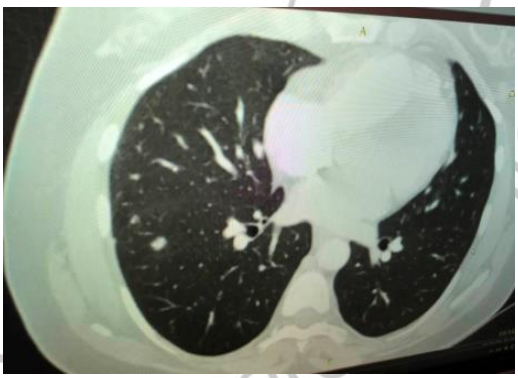

KI67 25%

Abdomen CT: NL

WBBS: NL

Lung CT: <1 cm pulmonary nodules

Question:

Is the patient considered metastatic?

Do we need to take bx?

Recommended Plan:

- ✓ Upon review of the chest CT scan, the pulmonary lesions are highly suggestive of metastases. Biopsy is also recommended, if feasible.
