Date: 1405/08/09, 2026/10/31

Patient's Name: Z.

Responsible Physician: Dr. Ebrahimi

Patient Presentation:

A 42Y/O woman

Clinical Presentation:

Ultrasound and MRI: Multifocal suspicious lesions in both breasts on.

Preoperative Core Needle Biopsy (CNBX):

-Right breast: Invasive lobular carcinoma (ILC).

-Left breast: Benign lesion.

Surgical Procedure:

Bilateral nipple-sparing mastectomy (NSM), implants reconstruction, and sentinel lymph node biopsy (SLNB).

Final Pathology:

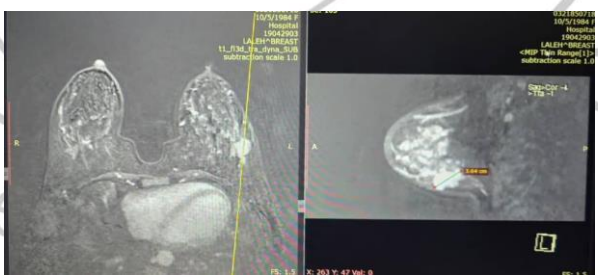

-Right breast: No residual tumor identified.

-Left breast: Invasive lobular carcinoma (ILC), measuring 1.5 cm, located at the 4 o'clock position.

-Intramammary lymph nodes: Two involved nodes (reported sizes: 3 cm and 1 cm).

- Sentinel lymph nodes: Negative bilaterally.

Question:

What is the appropriate adjuvant treatment, including the indications for post mastectomy systemic therapy?

Recommended Plan:

According to the Tumor Board decision, the patient requires adjuvant systemic therapy without radiotherapy.
