Date: 1405/07/18, 2026/10/10

Patient's Name: -F M

Responsible Physician: Dr. Aziminezhadan

Patient Presentation:

A 39Y/O female with;

- Left breast triple-negative breast cancer (TNBC)
- Germline genetic testing: negative

Initial Treatment (~2 years ago):

- Neoadjuvant chemotherapy + pembrolizumab
- Bilateral nipple-sparing mastectomy + axillary surgery
- Implant-based reconstruction
- Adjuvant radiotherapy
- Adjuvant pembrolizumab to complete 1 year

First Recurrence (~ 1 year after diagnosis)

- Local recurrence
- Surgical excision; implant retained
- Pathology: triple-negative
- Adjuvant capecitabine for 1 year

Current Presentation

- Extensive, extremely rapidly growing skin lesions
- No distant metastasis on restaging
- Considered operable; treating oncologist (Dr. Fakharian) recommends surgery

Breast Diseases Research Center

Question:

I know it will recur around the flap but don't know operation will help or not?

Recommended Plan:

- ✓ Systemic therapy was recommended, with surgery to be considered in case of treatment response.
