Date: 1405/07/18, 2026/10/10

Patient's Name: A.S

Responsible Physician: Dr. Emami

Patient Presentation:

An 84 Y/O female

• Poor performance status Presentation: palpable breast mass, approximately 2 cm on clinical examination

Pathology:

• Triple-negative

• Ki-67: 25%

• Ultrasound: mass measuring 15 × 13 mm

• Not considered a candidate for neoadjuvant chemotherapy due to poor performance status

• Referred for upfront surgery

• Developed tachyarrhythmia in the operating room; surgery cancelled

• Surgical and anesthesia teams consider surgery and general anesthesia permanently contraindicated

Question:

✓ What is the best treatment plan?

Recommended Plan:

✓ Local excision (lumpectomy/vacuum-assisted excision/RF ablation) followed by radiotherapy was recommended.
✓ Cardio-oncology and anxiolytic consultations were also recommended.
